

Stringent trial guidelines

Icon conducts internationally recognised, high quality clinical trials that conform to the ethical principles of the Declaration of Helsinki, Good Clinical Practice and all applicable national and international clinical trial guidelines.

Icon Research teams

Our research network is managed through staff in four core teams with a strong focus on quality and innovation:

- Research Innovation and Operations Team
- Research Implementation and Quality Team
- Research Coordination Team
- Research Data Team

Icon Cancer Foundation support

Research at Icon is supported additionally by a not-for-profit health promoting charity, Icon Cancer Foundation which is dedicated to improving patient access to treatment opportunities through the promotion of clinical trials.

ICON GROUP

Research

Icon Group offers Australia's largest private cancer clinical trials program coordinated by a team dedicated to delivering research opportunities to as many people as possible throughout Australia and across Icon's global network.

Icon utilises the exportation of Australian clinical expertise, alongside in-depth local knowledge and investment in new technologies to continue to deliver the best care possible, to as many people as possible, as close to home as possible. The Group's remote capabilities address gaps across cancer care, finding innovative approaches to allow us to partner with other organisations and support teams across the network to deliver comprehensive care and play our part in reducing the global cancer burden.

We provide patients and clinicians with access to new and emerging advances in treatment, conducting trials in haematology, medical oncology and radiation oncology across a wide-range of cancer types.

Within the private setting, Icon has an unparalleled track record participating in national and international clinical trials, including; Phase I to IV trials, trials sponsored by the pharmaceutical industry, and collaborative studies undertaken in partnership with various universities and collaborative groups.

Alongside our extensive clinical trials program, we conduct in-house research across all disciplines – medical oncology, radiation oncology, nursing, pharmacy and medical physics. This continual research provides professional development opportunities and leads the way in new techniques and advances in our treatments and protocols.

Accrual by Trial Phase

Accrual by Specialty

Our trial portfolio

- Over **450** patients on active trials
- **140** trials or research projects open to accrual for patients with solid tumours or malignant haematological diseases.
- **105** trials or research projects closed to accrual with patients still on treatment or in follow-up.
- **45** trials or research projects selected for participation and undergoing start-up at Icon.
- **55** trials or research projects in development or undergoing feasibility.

Fostering patient access to research

In addition to the current clinical trials and research projects, Icon Research delivers a program to facilitate the uptake of research and clinical trials at the 20+ Australian sites where there is limited or no research capabilities. The Remote Access to Clinical Trials (ReACT) program is an incorporation of both the ideology of the COSA Tele-Trials program into Icon Research's spoke-hub service model to better deliver more trials to more people.

Icon centres' advantages:

- Direct access to patients close to their community
- Coverage across urban and rural areas in all Australian states
- Specialised facilities with cutting-edge technologies
- Passionate clinicians with an imbedded culture of research
